# Horizontal Layout

```
<form>
  <div class="form-group row ">
    <label for="userNameInput"
      class="col-sm-4 col-form-label">
      User name
    </label>
    <div class="col-sm-8">
      <input type="text" class="form-control"
        id="userNameInput">
    </div>
  </div>
</form>
```

# Inline Forms

```
<form class="form-inline">  
  <div class="form-group">  
    <label for="userNameInput" class="mr-2">  
      User name  
    </label>  
    <input type="text" class="form-control mr-2"  
      id="userNameInput">  
  </div>  
</form>
```

# Demo

## Working with form layouts

# Applying Style on the Form Inputs

---

```
<input type="text" class="form-control" id="userNameInput">  
<select class="form-control" id="countrySelect">  
<textarea class="form-control" id="commentTextArea" rows="3"></textarea>
```

## Using form-control

```
<input type="text" class="form-control form-control-lg" id="userNameInput">
```

## Sizing the Control

**lg or sm exist**

```
<input type="range" class="form-control-range">  
<input type="checkbox" class="form-check-input" >
```

## Other Control Classes

# Working with input-group

```
<div class="input-group">  
  <div class="input-group-prepend">  
    <span class="input-group text" id="userNameAddon">@</span>  
  </div>  
  <input type="text" class="form-control" placeholder="Email">  
</div>
```

# Demo

## Adding the form input styles

# Demo

## Creating the order form

# Summary

Form components allow for rich and great-looking forms on a web page

Again plain CSS classes

**Up next:**  
Working with interactive  
components
